

Speegee Spatula

The Speegee is a reinvention of the globally used silicone spatula. Faced with cluttered kitchen drawers filled with items only used once and tons of silicone spatulas, Anthony Silva, the founder of Speegee Spatula, asked himself, "Why have so many spatulas when it only really does a couple of jobs?"

The Speegee was designed to accomplish any task that the spatula could, plus a whole lot more! From mixing, to folding, to spreading icing, transferring food, effortlessly scraping the sides of large pots, and even cutting, the Speegee outclasses the boring, old silicone spatula in every way. There's no longer a need to clutter your drawers and spend a fortune on new tools, when one tool does it all!

Tips

Okay, it looks cool and as you can see, it would be really good icing a cake. However, the silicone is heavy enough and flexible enough to do a really superior job in just traditional scraping, stirring and tossing!
